EDUCATION

Chinmaya Vishwavidyapeeth Deemed University, Kochi

Expected May 2027

B.Tech in Artificial Intelligence & Machine Learning

SKILLS

Data & Analytics: Python (pandas, NumPy, SciPy, scikit-learn), SQL, Excel, hypothesis testing (ANOVA, chi-square), KPI design (ROI, CTR, CPA, conversion rate), geospatial analysis

BI & Visualisation: Power BI, Streamlit, Matplotlib, Chart.js

Databases: PostgreSQL, Google BigQuery, SQLite, Firebase

AI & Automation: Prompt engineering, LangGraph (ReAct tool-calling), Qdrant (RAG), Gemini / Claude / Groq APIs

Web & App: React, React Native, TypeScript, FastAPI, Next.js, REST APIs

Tools: Git, GitHub, Jupyter, VS Code, Vercel

INTERNSHIPS

AI & ML Intern, Litmus7

June 2026

Infopark, Ernakulam, Kerala

- Built the frontend UI for a retail promotions performance analyzer in React, TypeScript, Vite and Tailwind CSS, and integrated it with the backend services.
- Helped structure the LangGraph ReAct tool-calling agent and implemented a Qdrant RAG pipeline for context-aware responses, with PostgreSQL for application data.
- Built a multi-screen flow covering promotion analysis, an AI chat interface and data refresh states; set up the backend environment on Windows.

Machine Learning Intern, Cognifyz Technologies

2026

Remote

- Completed an ML task series on a Zomato dataset covering preprocessing, restaurant rating prediction and location-based geospatial analysis, delivered as deployed Streamlit apps.

PROJECTS

Marketing Channel ROI Analysis

Python, SQL (BigQuery), Power BI

github.com/Techspell01/marketing-channel-roi-analysis

- Tested whether marketing channel performance gaps were real or noise across three datasets, including roughly 1M Google Analytics sessions queried in BigQuery.
- Calculated ROI, CTR, conversion rate and CPA per channel, then validated with ANOVA and chi-square testing; dropped two datasets that looked convincing on charts but failed significance.
- Found Referral converting at 5.29% against Organic Search at 0.94% on \$717,600 revenue ($p < 0.00001$, Cramer's $V = 0.133$); published as an interactive Power BI dashboard.

Restaurant Location-Based Analysis Dashboard

Python, Streamlit, Pandas, Geospatial Analysis

Cognifyz Technologies ML Internship · github.com/Techspell01/Restaurants-Location-Based-Analysis

- Built an interactive Streamlit dashboard for geospatial and statistical analysis of restaurant datasets, mapping locations via latitude/longitude coordinates.
- Implemented market concentration analysis with dynamic charts for the top 10 cities and localities, plus a stats table of average ratings, price ranges and dominant cuisines.
- Automated insight engine flags market saturation zones, highest-rated areas and premium dining clusters from uploaded CSV data.

EXTRACURRICULARS & AWARDS

Student Coordinator

- Hosted the college arts fest. Coordinated the Onam celebrations in 2024–25 and 2025–26, handling cultural activities and logistics.
- Freshers Day 2026: organised the fresher's welcome event. College Fest 2026: Volunteer Management Head for team allocation and event execution.

Awards & Recognition

- NSS (+2): Best Performer Award for contribution in social service activities.
- SPC (8th Std): Best Platoon Lead Award for school parade contingent leadership.

Strengths: Event & People Management · Creative Planning · Leadership
